This collection of articles provides theoretical foundations and perspectives for language acquisition research. Its purpose is to enable investigations of L1 attrition to avail themselves more fully and more fundamentally of the theoretical and empirical interests found in developmental psychology at the time.

Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn’t realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students “behind the curtain” of standard developmental science, so they can appreciate the structure and implications of a lifespan generative science.

The book is organized into seven parts. Part I focuses on ways to use knowledge about human development to help solve societal problems in real-life contexts, and considers applied developmental research to be purpose-driven, field-based, community-engaged, and oriented toward social change.

The contributors to this volume show that cultural processes work together to yield human behavior and changes in human behavior. With insightful contributions from more than 50 of the world’s leading developmental scientists, these two volumes will serve as an influential and comprehensive resource for researchers and practitioners interested in understanding the role of culture in the development of human behavior and thought across the lifespan.

The third edition of Life Span Human Development helps students gain a deeper understanding of the many interacting forces affecting development from infancy, childhood, adolescence and adulthood. It includes local, cultural, and contextual perspectives, research on diversity and change in human behavior, and the role of culture in the context of individual development, and the use of developmental theory in public policy and political science). The diversity of approaches and interests present in the book are representative of the breadth of theoretical and empirical interests found in developmental psychology at the time.

Developmental psychology is concerned with the scientific understanding of age-related changes in experience and behaviour, not only in children but throughout the lifespan. The task is to discover, describe, and explain how individuals develop, in different domains of development over time. The book offers an introductory overview of the key concepts and ideas in the field of developmental psychology, as well as an examination of how these concepts are applied to real-life situations.

Lifespan Developmental Psychology Study Guide: An Evolutionary Perspective

It retains the thorough content, volume of features and excellent writing style of previous editions but the layout is now fully structured to improve accessibility. Unlike other A-Level textbooks which focus solely on passing the exam, this book provides an in-depth exploration of developmental psychology, covering a wide range of topics from perceptual development to language development to gender development giving students a strong framework with which to link the empirical reports. M.D. Rutherford is Canada Research Chair in Social and Cultural Perceptual Development and Professor in the Department of Psychology, Neuroscience and Behaviour at McMaster University.

Language Development: The lifespan is a reference resource for those conducting research on language development and the aging process, and a supplementary textbook for courses in applied linguistics/linguism programs that focus on language attritionning and adult literacy development in second languages. It offers an integrative approach to language development that examines changes in language over a lifetime, organized by different theoretical perspectives, which are presented by well-known international scholars.

What are the changes we see over the life-span? How can we explain them? And how do we account for individual differences? This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient issues discussed in this volume, as are normative and atypical events contributing to life-span change.

The thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasizes that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters, Leonie Sugarmann outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Leventhal and Gaild. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of life events and transitions or as a narrative construction which creates a sense of any. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist the process. Now in this edition is increased coverage of the topical issue of successful ageing and a new chapter on the development of the elderly. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

In the past fifty years, scholars of human development have been moving from studying change in humans within sharply defined periods, to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes. The Handbook of Life-Span Development, Volume 2: Social and Emotional Development presents the study of human development conducted by the best scholars in the 21st century. Social workers, counselors and public health workers will receive coverage of the social and emotional aspects of human change across the lifespan.

Connect with Lifespan Development and collect information and driven by their McGraw-Hill, we have spent thousands of hours with you and your students, working to understand the key needs and concerns you face in human Development courses. The most common topics raised include managing the vast amount of content inherent to a lifespan course and ensuring the memorability of the assigned material — it is current and accurate! The result of this research is John Santrock’s Lifespan Development. Lifespan Development ensures students complete and understand the assigned material in a number of ways. Santrock’s hallmark Learning Goals pedagogy provides a comprehensive roadmap to the test material, clearly pointing out the core concepts fundamental to students’ learning and performance. Our adaptive study tool, LearnSmart, increases students’ efficiency by identifying students who are more or less prepared for the material, allowing students to focus their study efforts on the areas in which they need it the most. The Connect platform also includes powerful visual reports allowing them to quickly see where students’ strengths and weaknesses lie. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that their class time is more engaging and effective. The 14th edition continues with the connectives theme to help students better understand the concepts among the different aspects of lifespan development. This rethinking connects themes of Development Connections, Topics Connections, Connecting Development to Life, Connecting with Careers, and Connections through Research—lies together concepts from across chapters to reinforce the learning process and connects the material to students’ everyday lives and future aspirations. Our Milestones of Development video series helps bring the course material to life, allowing students to witness development as it unfolds. And of course, all of the test material is informed by Life-Span Development’s unique board of expert consultants—a who’s who of development psychology—who make sure the material is as accurate and up-to-date as possible.

Developmental Psychology: From Infancy to Adulthood, 3rd edition, continues to bring together a balanced focus on Australian and international research contributions in developmental psychology. Students and lecturers alike will find this text addresses issues of lifespan development in a rigorous and challenging way using a thematic rather than chronological approach. International and national research on graduate attributes identifies critical thinking as one of the most important skills for psychology students. The inclusion of Critical Thinking for Group Discussion at the end of each chapter is designed to encourage students in the development of this key skill. These questions and activities develop the student’s ability to engage in discussions on truth and validity and evaluate the relative importance of ideas and data. Students learn by doing, and this is encouraged through interactive features such as Stop and Review, Research Focus Boxes, and Practical Exercises which engage them in group discussion and challenge them to delve into complex and cross-domain analysis of lifespan development. Concept maps at the start of each chapter provides students with a visual snapshot of the chapter content.

This year, thousands of students will test out of classes by taking a DANTES test. With over 1,700 colleges and universities that accept DANTES tests as credit, it has never been easier to complete your college education quickly. DANTES tests save you class time, money for books and tuition and shorten the path to your degree. DANTES tests, are also known as DSST tests, which stand for DANTES Subject Standardized Test. Our study guides are a helpful way to learn the information for the DANTES test in the most condensed manner possible. This study guide is 130 pages long and includes 146 sample test questions. You too can pass this popular DANTES test.

This comprehensive guide offers a rich introduction to research methods, experimental design and data analysis techniques in developmental science, emphasizing the importance of an understanding of this area of psychology for any student or researcher interested in examining development across the lifespan. The expert contributors enhance the reader’s knowledge, understanding of methods, and critical thinking skills in this area of study. They cover development from the prenatal period to adolescence and old age, and explore key topics including the history of developmental research, ethical, animal models, physiological measures, eye-tracking, and computational and robotic models. They accessibly explore research measures and design in topics including gender identity development, the influence of neighborhoods, mother-infant attachment relationships, peer relationships and social development, brain imaging and developmental psychopathology and social policy, and the examination of memory across the lifespan. Each chapter ends with a summary of innovations in the field over the last ten years, giving students and interested researchers a thorough overview of the field and an idea of what more is to come. Conducting Research in Developmental Psychology is essential reading for upper-level undergraduate or graduate students seeking to understand a new area of developmental science, developmental psychology, and human development. It will also be of interest to junior researchers who would like to enhance their knowledge base in a particular area of developmental science, human development, education, biomedical science, or nursing.

This study guide contains informational study material, sample test questions and Flash cards to help the DANTES/DSST Lifespan Developmental Psychology exam. In the Second Edition of her award-winning, chronologically organized text, Lifespan Development: Lives in Context, author and teacher Tara L. Kuther explores the dynamic interactions between individuals, our genetic makeup, and the diverse contexts that shape our growth and development at every stage of life. With a clear and approachable writing style, Kuther integrates current research findings with foundational, classic theory and research to present a comprehensive yet concise introduction to the field. The book is organized around part-level overviews brought to life in Dr. Kuther’s Chalk Talks, brief animations narrated by the author. Within each chapter, Lives in Context Video Cases spotlight real individuals’ contexts and experiences to bring key concepts home. Lively feature boxes and critical thinking questions encourage students to consider concepts, apply theoretical perspectives, and explore applications of lifespan development in their future careers.
